## mining

**Mining in India** is an important economic activity which contributes significantly to the economy of India.

The country exports a variety of minerals—found in abundance its geographically diverse regions—while it imports others not found in sufficient quantities within its geographical boundaries

# AYUR HINDUSTAN ASIA RESOURCES GROUP

MINING

LOGISTICS

## geographical distribution

Manganese, bauxite, uranium, limestone, marble, coal, gems, mica, graphite etc. exist in large quantities in our mines and the net extent of the minerals of the region is yet to be assessed. Our Mines fall under the second largest belt of minerals in the country.

## logistics

India is being touted as the land of opportunity for logistics service providers all over the world. The demand for logistics services in India has been largely driven by the remarkable growth of the economy, projected to grow at 9-10 per cent in next few years. The Indian logistics market, valued at \$14 billion a couple of years ago, is expected to grow at a CAGR (compounded annual growth rate) of 7-8 per cent.

## logistics - future

Industries such as chemicals and pharmaceuticals, metals, FMCG, cement, textiles and capping it all the retail segment have been identified as the top contributors to the projected growth of the economy and therefore to logistics revenues. The new generation corporates are looking to outsource non-traditional logistics requirements such as reverse logistics, inventory management, order processing, distribution, and labeling and packaging.

## trading

**Commodity trading in India** has a long history. In fact, commodity trading in India started much before it started in many other countries. However, years of foreign rule, droughts and periods of scarcity and Government policies caused the commodity trading in India to diminish. Commodity trading was, however, restarted in India and today AHARG enjoys a good share in the Trading Market.

## education

**Education in India** is provided by the public sector as well as the private sector, with control and funding coming from three levels: federal, state, and local. India's higher education system is the third largest in the world, after China and the United States. According to the Census of 2011, "every person above the age of 7 years who can read and write in any language is said to be literate". According to this criterion, the 2011 survey holds the National Literacy Rate to be around 74%. Government statistics of 2001 also hold that the rate of increase in literacy is more in rural areas than in urban areas

We presented the results of our work in the preparation of ground water prospects maps under the RGNDWN (Rajiv Gandhi National Drinking water mission) sponsored by the Rural Development Ministry, Govt. of India and how the information generated by remote sensing and GIS techniques in the maps could be:

Profitably used in planning ground water exploration programmes in the ground water deficit areas. The importance of the maps lay in narrowing down the target areas for Pharmaceutical Management operations so as to minimize the risk of failures.
